Projects

Gemini Clone.

[GitHub](#)

- Used React to design an interactive and responsive user interface and state management.
- Integrated the **Google Gemini API** to replicate the core functionalities of the Gemini system.
- Built with a component-based architecture to allow easy scaling and maintenance.

UI/UX React Project

[GitHub](#)

- Built using **React** for fast, dynamic, and scalable web development and integrated **Tailwind CSS** to create customizable, modern, and responsive designs.
- Ensured the website is fully responsive across various screen sizes and devices.
- Developed reusable React components to promote **code reusability** and maintainability.

Awwarded Website Clone

[GitHub](#)

- Recreated an award-winning website with close attention to design and functionality details .Developed using **HTML**, **CSS**, and **JavaScript** for frontend structure and design.
- Integrated **Locomotive.js** to provide a smooth and responsive scrolling experience.
- Added subtle animations for an interactive and dynamic user experience.
